---

### SUMMARY

---

Software Engineer with 10+ years of iOS development.

I enjoy solving complex technical and business challenges and turning ideas into stable, scalable products. I focus on clean architecture, maintainable code, and high quality at every stage of development.

7+ projects from scratch to App Store within different domains, such as: dating, social media, messengers, B2B solutions, pay systems, WebRTC.

### SKILLS

---

**Programming languages:** Swift, Objective-C

**Frameworks/Libraries:** SwiftUI, UIKit, AppKit, Realm, Combine, Swinject, Firebase, Core Data, Stripe, MapKit

**CI/CD:** Fastlane, GithubActions, Jenkins

**Testing:** XCTest, Quick, Nimble

**Tools:** Git, Sourcery, XcodeGen

**Concurrency:** Grand Central Dispatch (GCD), OperationQueue, Structured Concurrency, async/await

**System Design:** Clean Architecture, The Composable Architecture (TCA), Redux

**Software Design Patterns:** MVVM, MVC, MVP, VIPER

**Performance Evaluation:** Benchmarking, Profiling, Runtime optimization

### WORK EXPERIENCE

---

#### iOS Engineer

Oct 2022 - Present

NextXI

- Delivered a full-featured native iOS application, contributing as a core team member from early product stages to App Store submission
- Translated product vision and web platform logic into a scalable iOS solution, aligning mobile UX, flows, and features with product
- Enhanced readability of complex datasets by supporting heatmap-style visual emphasis for player metrics, improving scanability and decision speed on mobile
- Implemented an interactive fixture visualization experience (ticker-style, probability-driven difficulty insights) to help users identify favorable runs and make faster planning decisions
- Developed a football team planner allowing users to assemble squads, plan transfers, and iterate on lineups across upcoming fixtures

#### iOS Engineer

Oct 2020 - Oct 2022

Worklife

- Integrated the largest acceptance network possible via a classic Visa payment card: Apple Pay and Stripe
- Researched, analyzed, introduced, and then applied new scalable architecture (MVVM + Coordinator), that is way better suited for a fast-growing, scalable project
- Implemented a flexible, easily maintaining, reliable system using Analytics + Firebase + Crashlytics + Sentry for real-time monitoring issues which is increasing support response and action time by up to 56%. Immediately reduce code defects on the fly by 37%

- Took all advantages of Redux via ReSwift in creating a unidirectional flow through entire app

Results achieved: provided meaningful service for B2B clients such as Credit Agricole, Navigo, Saint-Gobain. Over 100.000 crash-free users. Adapted to rapidly raised product features and, therefore implementations.

## iOS Engineer

Oct 2019 - Oct 2020

Yoopies

- Collaborated with a chief designer and a mobile team in the creation and implementation of a custom UI framework
- Generated only custom-constrained UI written code on anchors without Storyboards and Xibs
- Boosted CI/CD processing by 100% (developed from scratch) using Jenkins + Fastlane combination

Results achieved: reduced development time by 40%. Improved testability by 80%

## iOS Developer

Nov 2018 - Oct 2019

Developex

- Researched, then provided a new secure peer-to-peer connection via sockets
- Provided a unique onboarding technique that brings to users a totally new experience, therefore as a result product satisfaction and revenue (+ 11%)

Results achieved: increased amount of new users by 10% and daily engagement by 19%. Core Graphics moves to the next level with a new custom stickers feature

## iOS Developer

Apr 2017 - Oct 2018

Genesis Tech

- Developed and launched a new iOS application with an upgraded architecture (VIPER) using a custom routing system significantly lowering the entry threshold for a new developers
- Analyzed and adopted the dating flipping card system. Achieved a smooth transition between cards
- Integrated chat system from scratch. Worked on a long polling system - highly optimized, stress-resistant for bad connection. Pagination, delivered and read status, media in chat
- Covered core functionality with Unit Tests, reducing bug-related delays by 21% and improving overall code quality

Results achieved: gained experience collaborating with the whole product team in real-time: analytics, backend, frontend, CTO. Improved skills to be more agile and correspond startup speed. Raised enormously (26 million users) profit product from the beginning

## iOS Developer

Apr 2016 - Apr 2017

GBKSOF

- Researched and implemented the best way of grouping pins for MapKit
- Evaluated, reviewed, implemented a painful conversion from legacy Swift 2.3 to 3.0 (500+ issues)
- Working in a large team (20) with 5+ projects at the same time

Results achieved: gained strong, solid knowledge & experience in Swift Foundation

## Earlier iOS Experience

Jan 2015 - Apr 2016

- WondersLab Inc. (PITCH / Bitgenie Inc)
- Ecodery

## EDUCATION

### CS50x: Computer Science

Jan 2026 - Mar 2026

Harvard University

### Master's Degree

Sep 2009 - Aug 2014

Zaporizhzhia Polytechnic National University
